

THE STRUCTURE OF SUNOR GREENHOUSE

One of the most important differences of structure 2 of greenhouses from Structure 1 is that **STRUCTURE 2** is designed with grooved channels in the frame for the polycarbonate panels to slot into for extra strength and stability against wind and wear.

SUNOR GREENHOUSE is designed not only to give you a more solid rigid structure; it also serves another very important purpose as reinforcement against winds and weather. Pls check the detail info as following:

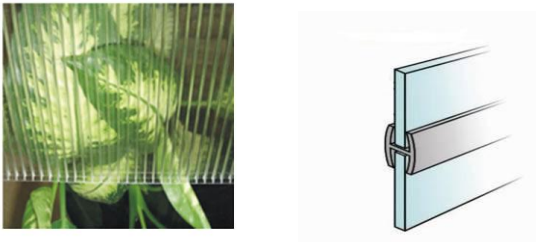

1) FULL SIDE WALL BRACING

2) GROUND BASES AND ANCHORS

3) PC SHEETS

4) GUTTER AND OPEN VENT

5) CONNECTION FUTURES

6) ASSEMBLY STEPS
